

Sentricon® *Termite Colony Elimination System*

Get peace of mind from true termite protection.

No. 1 brand¹ in termite protection.

The Sentricon® *Termite Colony Elimination System* is the effective, environmentally responsible² way to protect a home from termites. That's why it's the product of choice for millions of homeowners and used to protect many national landmarks, such as the White House, the Statue of Liberty and Independence Hall. The Sentricon System is preferred by consumers 3-to-1 over the next leading termite bait.¹

Proven termite colony elimination.³

The Sentricon System has been proven to eliminate the termite *colony* — not just individual termites. This fact is backed by extensive third-party research — including 30 university studies and 45 published scientific articles — as well as more than 15 years of real-life success. That gives you and your family greater peace of mind.

The environmentally responsible choice.²

The Sentricon System uses only a few grams of active ingredient to eliminate termite colonies. This active ingredient is contained in bait in Sentricon stations, where it poses no hazard to groundwater, and has no label restrictions for use around wells and cisterns. Among its green credentials is this: The Sentricon® System was registered under the Reduced Risk Pesticide Initiative of the U.S. Environmental Protection Agency. And it is the only termite control product ever to receive the Presidential Green Chemistry Challenge Award.

Sentricon® Termite Colony Elimination System

How it works.

As part of a service contract, the Authorized Operator ...

1. Inspects the property for signs of termites

2. Places Sentricon® stations in the soil around the home

3. Monitors Sentricon stations for termite activity

4. Delivers Recruit® termite bait to the termites, which they share until the colony is eliminated

5. Continues monitoring Sentricon stations as needed to protect against future invasion

Easy to live with.

To eliminate an existing termite colony or protect against an invading colony, Sentricon stations are placed in the soil around a home. This is much less disruptive to your family, buildings and landscaping than other termite treatments:

- No drilling in floors and foundations
- No extensive digging or trenching in the landscape and other areas around a home
- No chemical solution injected in the ground under and around a home
- No tank trucks of chemical solution
- No scheduling hassles

Reliable, ongoing asset protection.

The Sentricon System is available only from specially qualified Authorized Operators of the Sentricon System, who are committed to protecting homes from destructive termites. Authorized Operators are selected by the manufacturer, Dow AgroSciences, from among the industry's best pest management professionals. They are required to conduct ongoing comprehensive training of their employees, track their service of your home in a computerized recording system, and pass an annual stewardship review.

The constant presence of the Sentricon System and attention from these professionals give you and your family peace of mind.
